Perfectus has created an integration with Documentum that allows our customers to create content enabled applications on top of the document management server.

Our integration points include:

- Provides the ability for an Interview Designer to store document clauses (fragments) in Documentum along with rules on how these clauses will be used in assembled documents.

- A fetcher for extracting any files required during the document assembly process from Documentum.
- Ability to set meta-data and distribute documents generated by Perfectus into Documentum.
