

Easy Interview is our web-based presentation layer that acts as a wizard to accurately capture data from the end user.

Each question and page is dynamically generated based on previous answers or web service calls. Sophisticated rules-based decision-tree logic guides the user through long and short versions.

- Contextual help, hints and examples to fill in information
- Validation and mandatory field for accurate data capture
- External page access (e.g. credit card payment gateway) for process driven applications
- Custom pop-ups for external data entry
- On-page distributor allowing data to be sent at any stage during an interview
- Dynamic strings giving a customized user experience.
